

# Priscolith® *eco strip*

The Priscolith ECO STRIP utilizes many of the design advances of the Priscolith SNOW WHITE, but uses a more traditional surface layer to provide a lower cost option, as well as the ability for use with UV and EB coating. The Priscolith ECO STRIP is easily strippable and provides a .032" relief.

## Features:

- Easily strippable,
- Reduces coating build-up
- Excellent ability to lay down satin and matte coating
- Consistent coating layer
- Washes easily
- High smash resistance

## Benefits:

- Makes spot coating easy
- More coating goes to the sheet, less on the coating unit
- Reduces streaking and therefore reduces waste when running satin and matte coating
- Carries more coating, therefore higher gloss
- Smooth surface provides easy clean-up
- Smash resistance assures fewer blanket changes

## Durability:

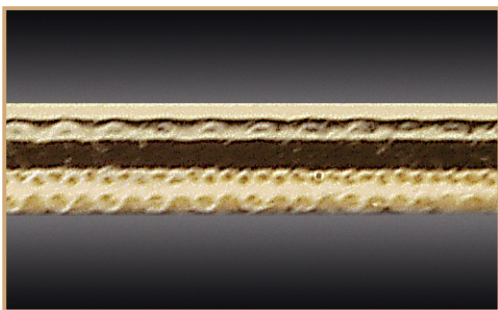

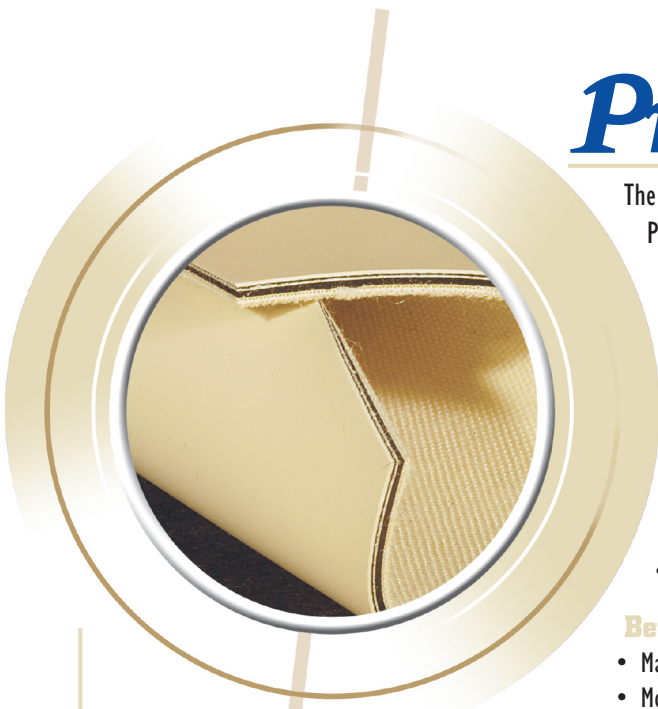

- Minimal swelling
- High tensile strength backing prevents stretching
- Longer life
- Chemical resistant

## Physical Characteristics:

- Color: Cream
- Cast Surface: 3 Ply .067 +/-0.0024  
4 Ply .077 +/-0.0024
- Elongation @ 22.5 kgf: 3 Ply 1.6%  
4 Ply 1.6%
- Hardness: 75 Shore A

## ECO STRIP MYLAR COATING BLANKET OPTION

Often, when large sections of a coating blanket must be removed for spot coating, the blanket begins to lose stability often causing registration problems. Printec has solved this problem by offering each of our coating blankets with a .014" Polyester backing material, providing enhanced stability.
