

# Which Kongsberg cutting table fits you?

There is a suitable Kongsberg cutting table for every application.

A guide through the range of Kongsberg cutting tables.

# Introduction

## **There is a suitable Kongsberg table for every application**

Whether your focus is on signage, packaging or displays. Whether you handle vinyl, corrugated board or wood. Adding finishing services to your portfolio distinguishes you from your competition.

If you think of a fast machine that allows precision die-less cutting, that handles a vast variety of substrates and that processes a large amount of deadline-oriented material, a Kongsberg digital cutting table is an optimal choice.

Kongsberg cutting tables bring the best quality for any job or application.

But which Kongsberg table is right for your specific business? Select an application on the next page and find out.

# | What do you want to produce?

Corrugated packaging production

Display production

Flexo plates

Folding Carton Samplemaking

Corrugated samplemaking

Labels and decals

Protective packaging

Signage & small promotional items - rigid materials

Signage & small promotional items - flexible materials

Varnish blankets

I am looking for an entry level cutting table

		High	XE10 

# | Can't find it here

As the preceding list is only limited by our imagination, it merely serves as an impression of application possibilities.

## **Esko helps you succeed**

We warmly invite you to challenge us with your own ideas.

Visit [www.esko.com/kongsberg](http://www.esko.com/kongsberg) or talk to one of our [experts](#) to find out which Kongsberg digital cutting table fits your business needs.

There is a suitable Kongsberg table for every application!

# | The Kongsberg XE10

The Kongsberg XE10 is a table for short run die-less cutting and creasing of unprinted small format sheet materials.

## Want to know more?

Learn more about the benefits and the features of the Kongsberg XE10 on [www.esko.com/kongsbergxe](http://www.esko.com/kongsbergxe).

### Space efficient footprint

The Kongsberg XE10 has a space-efficient, small footprint. Its work area measures 31.5" x 43.3" / 800 mm x 1100 mm. It can accept materials as large as 39.4" x 59.1" / 1000 mm x 1500 mm.

### Extensive tool range

The Kongsberg XE10 features a tooling system which has been modified to satisfy folding carton requirements - and is fast to install and maintain.

### Rack-and-pinion drive system

Assisted by a rack-and-pinion X / Y drive with precise motion control, a fast servo system, the Kongsberg XE10 tables deliver high operational speed and precision — with easy operation.

### Superb finishing quality

The lightning-fast motion, combined with superb accuracy, increases finishing productivity and quality. The tooling system was designed for fast, trouble-free tool exchanges or replacement.

# | The Kongsberg X Starter

The Kongsberg X Starter comes with fixed application bundles, depending on the type of applications you wish to handle. The Kongsberg X Starter is based on the Kongsberg X Series and offers excellent value for money.

## Want to know more?

Learn more about the benefits and the features of the Kongsberg X Starter on [www.esko.com/kongsbergx](http://www.esko.com/kongsbergx)

### Tool exchange

Exchanging different tools is quick, tool-free and error-free because every insert is identified by a unique bar code.

### Tool inserts

Insert knife tools are available for cutting all relevant materials ranging from thin paper to synthetic sheets through heavy-duty packaging and display material. The tooling selection also includes creasing, plotting and drilling tools.

### Table Mapping

Dynamic table mapping provides real-time updates to the exact field conditions. Precise automatic z-control during finishing means less damage to the underlay.

### Rack-and-pinion drive system

Kongsberg's rack and pinion drive system support balances raw power and the finest axis control. The result is speed, durability and strength.

### Sandwich steel construction

The Kongsberg X Starter series features the famous, rock-solid Kongsberg table-top construction that will never warp or go out of level, even after decades of heavy use. Most Kongsberg cutting tables — thousands of them — are still in operation today.

### Camera registration

The camera system ensures highly efficient production along with simple and extremely accurate print-to-cut registration, even with print-distorted materials (available on the Sign & Display configuration).

### i-cut Production Console

The front-end turns the Kongsberg X into the most flexible cutting table on the market today. The i-cut Production Console offers users powerful functionality for signage, display and packaging production.

iPC ensures highly efficient production along with extremely accurate print-to-cut registration. The state of the art user interface offers improved usability and there's personalized job management per operator.

To ensure perfect quality – every time – iPC gives you “shared resources”, using metadata to automatically select the perfect tool for the job, to adjust the hardware and optimize the cutting sequence.

[Return to the application overview](#)

# | The Kongsberg X Series

The Kongsberg X offers versatility for a wide range of cutting applications. Whether your focus is 2D or 3D, or packaging, signs or displays with just about any material from vinyl over paper board to wood; the Kongsberg X is perfect for any job or application.

## Want to know more?

Learn more about the benefits and the features of the Kongsberg X on [www.esko.com/kongsbergx](http://www.esko.com/kongsbergx)

### Tool exchange

Exchanging different tools is quick and error-free, because every insert is identified by a unique bar code. Specific tuning parameters are stored to avoid expensive operator errors.

### Toolheads

A set of advanced, quick change toolheads provides unsurpassed versatility, making it easy to set up the machine to process any material for just about any application.

### Tool inserts

Insert knife tools are available for cutting all relevant materials ranging from thin paper over synthetic sheets to heavy-duty packaging and display material. The tooling selection also includes creasing, plotting and drilling tools.

### Milling

Kongsberg X tables can be configured for milling applications ranging from sporadic, light-duty routing to lengthy jobs working with heavy-duty materials — all with record-breaking productivity.

### Table Mapping

Dynamic table mapping provides real time updates to the exact field conditions. Precise automatic z-control during finishing means less damage to the underlay.

### Power

The Kongsberg X Series offers the raw strength required to process even the most rugged materials at high-production speeds. Kongsberg X tables will keep on going when others might quit.

### Sandwich steel construction

The Kongsberg X series features the famous, rock-solid Kongsberg tabletop construction that will never warp or go out of level, even after decades of heavy use.

### Device Manager

The Device Manager gives you the power to reduce lead times, manage short production runs intelligently, eliminate material waste and optimize equipment output.

### i-cut Production Console

The front-end turns the Kongsberg X into the most flexible cutting table on the market today. The i-cut Production Console offers users powerful functionality for signage, display and packaging production.

iPC ensures highly efficient production along with extremely accurate print-to-cut registration. The state of the art user interface offers improved usability and there's personalized job management per operator.

To ensure perfect quality – every time – iPC gives you “shared resources”, using metadata to automatically select the perfect tool for the job, to adjust the hardware and optimize the cutting sequence.

### Rack-and-pinion drive system

The rack-and-pinion drive system provides speed, durability and strength, drives through dense/thick materials with ease.

### Auto Tool Adjust

Auto Tool Adjust (optional) is a unique technology providing automatic tool calibration: tooling always runs with perfect alignment at high processing speeds.

# | The Kongsberg XP Auto

The Kongsberg XP Auto is your utmost working horse, designed to take on unsupervised full-time production. The Kongsberg XP Auto is the perfect complement to a wide format digital printer, offering a full digital production workflow.

## Want to know more?

Learn more about the benefits and the features of the Kongsberg XP Auto on [www.esko.com/kongsbergxpauto](http://www.esko.com/kongsbergxpauto)

### The System Status Lamp

quickly shows the state of the machine (Running - Stopped - Error condition)

### The XP tooling is mounted on two different Z-axes:

one optimized for power, it can push a large-size crease wheel down with an equivalent force of 50 kg; the other optimized for speed, it moves the knife tooling up and down with blazing efficiency.

### The in-stack

is based on an automatic lift table that keeps the top of the stack at a constant level. It ensures dependable sheet separation and repeatability in the sheet loading. Stacking capacity can be increased to one meter as an option.

### The cutting station

is where the sheets are processed. It consists of a vacuum bed with up to eight zones to ensure positive material hold-down on different material sizes.

### The unload traverse

transports the cut sheet from the cutting station to the out-stack. It features suction grippers with adjustable position.

### The out-stack adjusts

automatically so its top is at a constant level. It can be emptied while the machine continues working on the next sheet.

### The ergonomic workstation

contains the main operator panel and the PC.

[Return to the application overview](#)

# | The Kongsberg C Series

The Kongsberg C is specifically designed to operate continuously in a 24/7 production environment. The machine smoothly handles all frequently used substrates, even the most rigid materials, at record breaking speed. This makes it the table of choice for all signage, display and packaging applications.

## Want to know more?

Learn more about the benefits and the features of the Kongsberg C on [www.esko.com/kongsbergc](http://www.esko.com/kongsbergc)

### Carbon composite traverse

The extreme rigidity of carbon makes the traverse capable of high speeds, accuracy and heavy payload, even when working on the most demanding materials.

### Tools

A complete set of advanced, quick change tools provides versatility, making it easy to set up the cutting table to process any material.

### High powered milling

Kongsberg C tables can be configured for milling applications ranging from sporadic, light-duty routing to lengthy jobs working with heavy-duty materials — all with record-breaking productivity.

### Auto Tool Adjust

Auto Tool Adjust (optional) is a unique technology providing automatic tool calibration: tooling always runs with perfect alignment at high processing speeds.

### Auxiliary control panel

The new auxiliary control panel at the end of the traverse offers easy access for the operator, speeding up production.

### Rack- and-pinion drive system

Provides speed, durability and strength, drives through dense or thick materials with ease.

### Table Mapping

Dynamic table mapping provides real time updates to the exact field conditions. Precise automatic z-control during finishing means less damage to the underlay.

### Down force

The Heavy Duty Tool Unit offers 500N / 110lbs of down force, sufficient to crease even the most challenging materials.

### Sandwich steel construction

The Kongsberg C series features the famous, rock-solid Kongsberg tabletop construction that will never warp or go out of level, even after decades of heavy use.

### Device Manager

The Device Manager gives you the power to reduce lead times, manage short production runs intelligently, eliminate material waste and optimize equipment output.

### i-cut Production Console

The front-end turns the Kongsberg X into the most flexible cutting table on the market today. The i-cut Production Console offers users powerful functionality for signage, display and packaging production. iPC ensures highly efficient production along with extremely accurate print-to-cut registration. The state of the art user interface offers improved usability and there's personalized job management per operator. To ensure perfect quality – every time – iPC gives you “shared resources”, using metadata to automatically select the perfect tool for the job, to adjust the hardware and optimize the cutting sequence.

# | Integrated software tools maximize your productivity

Esko not only delivers the right cutting table for the right application. You can be assured that it runs smooth with the numerous productivity boosting functions.

## State-of-the art front-end software

i-cut Production Console (iPC) is the next generation front-end for efficient operation of Kongsberg cutting tables.

The intuitive user interface enables the operator to monitor all aspects of the production. It prevents errors and speeds up your operation.

## One table like you would have two

i-cut Production Console enables MultiZone production.

With the surface of the Kongsberg table virtually divided into two or more zones, production can take place in one zone, while the operator offloads finished jobs and replaces material in the other zones.

## Boost your digital finishing with Device Manager

Device Manager is the ultimate smart management tool to run your production floor.

Through the intuitive interface you follow job status, prioritize jobs in the queue, insert rush jobs and balance workloads between all connected devices.

# | Integrated software tools maximize your productivity

## Optimize your large format printing workflow

Eliminate errors, save time and reduce waste with [i-cut Suite](#).

*i-cut Suite* is a collection of pre-production software, specifically addressing users of large format digital printers and/or digital finishing systems.

*i-cut Suite* tackles all bottlenecks in your workflow. From preflighting PDF files, over preparing graphics and creating layouts, to printing and finishing in perfect registration. *i-cut Suite* streamlines every step of the way.

## Automate prepress production

[Automation Engine](#) allows you to automate your entire prepress production process.

This not only speeds up the process, but also highly reduces the error rate and the need for operator intervention.

## Produce your own packaging and displays

[ArtiosCAD](#) is the world's leading structural design solution for packaging and displays.

With *ArtiosCAD* you create accurately fitting packaging around a product model in minutes.

*ArtiosCAD* makes the design of displays a lot easier too. Start from scratch with your own ideas or use an extensive library of parametric rebuildable design templates.

The online *ArtiosCAD* [Display Store](#) gives you an even bigger range of production ready design templates.

# | Order bits and blades 24/7

Once it becomes clear which Kongsberg cutting table best fits your business needs, you can easily find and order the correct bits and blades for it at the [Esko Store](#).

## **Intelligent Bits & Blades finder**

By entering your type of Kongsberg table and the material you want to work with the bits and blades finder will offer you the most appropriate bits and blades for your application.

## **Quick repeat orders**

The Esko Store keeps track of your configuration and makes repeat orders a breeze.

## **World wide available 24/7**

The Esko Store is easy to use and available 24/7. Your orders are shipped directly from warehouses on all continents around the globe.

## **One stop shop**

The Esko Store is a one stop shop for all your Kongsberg needs, providing a wide choice of accessories to meet your Kongsberg cutting table's versatility.

## **Continuous innovation**

Esko's R&D department continuously innovates on Kongsberg tools, bits, knives and blades so you always present your customers with the highest quality and the best results. All consumables in the Esko Store have been tested and approved by our R&D department.
