PRISCO® Autowash Tension Reducer (ATR)

Product Description:

PRISCO ATR is a concentrate designed to facilitate automatic blanket cleaning on the press. It also keeps the water and reservoir of an automatic blanket and roller washup system in optimum condition. Additionally, PRISCO ATR reduces friction of dry cloths and Pro-Clean rolls during a washup cycle which in turn dramatically improves the removal of excessive paper and calcium buildup on blankets. Regular use of the product will assure that an effective and constant supply of water will be available for the wash cycle for thorough cleaning. If dry cloths or Pro-Clean rolls feel dry when using PRISCO ATR in automatic washup systems, program the water to spray onto the roll before the first pad-on. This will help to lubricate dry cloths and activate solvent contained in Pro-Clean rolls.

Advantages:

- By reducing water surface tension, the distribution of water onto the blanket is improved which helps thoroughly clean calcium and paper buildup from blankets during a washup cycle.
- Reduces maintenance time and promotes faster make-readies.
- Prevents buildup of algae and calcium deposits in the reservoir, tubes and spray nozzles which in turn improves water flow.
- Prevents any corrosive action from the water on the press.

Directions:

Add 6.5 oz. (5%) of PRISCO ATR to each gallon of water in the water reservoir of a press automatic washing system. For use on presses without an automatic washup system, add 1.75 oz. PRISCO ATR to each 1-quart water bottle. This mixture will help facilitate the removal of paper and calcium buildup on blankets and rollers.
