Prisco® Eezy-Klene UV

Product Description:

PRISCO Eezy-Klene UV is a new cleaner that has been especially designed to clean rollers and blankets used for conventional UV and the new HUV-LED ink products. This viscous product is clear and is designed to be applied and stay in place during its cleaning operation. Higher viscosity cleaners are easier to control. Eezy-Klene UV is formulated to be thick in order to stay in place and provide deep cleaning action during wash-ups and color changes.

Advantages:

- Thorough and deep-cleaning of ink rollers
- Improves ink receptivity of ink rollers
- Higher viscosity for easy application on rollers
- Rinses off with water

Directions:

After cleaning ink off the rollers, apply PRISCO Eezy-Klene UV along the top of the rollers. Allow the product to run-in for 5 to 6 minutes. Next, set the washup blade and rinse with water. The product should always be removed from the rollers within one hour of application.
